

Mia - Intelligent Credit-to-Cash Automation

Mia is a smart, data-driven credit-to-cash automation platform. From customer on-boarding to invoicing and settlement, Mia captures data across your receivables processes and enables intelligent automation decisions that deliver operational efficiency, business growth and a better experience for your customers.

The only credit-to-cash cloud solution in the market which can download your customers historic payment data as well as capture new transactions, Mia is unique in being able to facilitate immediate data-based decisions which can automate repetitive tasks and deliver efficiencies from day one.

On-going data capture and analysis then enables your business to respond to changes in market, or customer, conditions, ensuring your business has the agility required to continue to optimise efficiency within your receivables function.

Utilising this historic data, the ongoing capture and analysis of all future customer transactions, and information from external credit sources, Mia will ensure that for every aspect of your credit to cash cycle, each individual customer receives the right action, at the right time, to optimise sales whilst minimising the risk default – protecting your cash flow and your customer relationships.

Square Marble Technology is a software house which specializes in developing and delivering order to cash SaaS technology solutions for some of the world's leading brands. Leveraging 25 years industry experience, SMT delivers artificial intelligence solutions which support innovative business process transformation driving growth.

Our software provides transparency across legacy processes so that C-Suite leaders can capture and interpret data, deliver change and then re-measure until optimal results are achieved within the process.

Market conditions continually evolve. We believe processes need to change with them.
